

gorenje

KITCHEN APPLIANCES 2013/14

MORE THAN 60 YEARS OF MANUFACTURING EXCELLENCE

Gorenje is one of Europe's leading appliance manufacturers with the largest production facility in Europe manufacturing over 4 million quality appliances each year. Our product range combines the very latest technology and innovative designs. Widely recognised as one of the fastest growing appliance brands in the UK, Gorenje is a multi-award winning brand that is successfully sold in over 70 countries. Our confidence

in new technologies combined with our constant innovation is demonstrated by our unique free 5 year parts and labour guarantee offered on most of the Gorenje range. Gorenje is well on its way to achieving its goal to become recognised as the most INNOVATIVE, DESIGN-MINDED manufacturer of kitchen appliances in the world.

Sales in 70 markets around the world

PROOF OF EXCELLENCE

Superior quality and excellence of design are Gorenje's core brand value; they employ the latest quality assurance standards such as the ISO9001 standard. Gorenje manage their technological processes by the 6 sigma principle and comply with the highest environmental standards (ISO14001 and EMAS) as well as supplying an efficient after sales services.

www.gorenje.co.uk

Awards

Gorenje's reputation is witnessed by numerous prestigious international awards including the Red Dot Design Award; Plus X Award™; Grüner Stecker prize; Get Connected Product of the Year Award; Product Innovation Award; Trusted Brand; Superbrands; Icograda Excellence Design Award; ICSID Excellence Design Award; and Innovation of the year; to name but a few.

winner 2012

OUR COMMITMENT TO THE ENVIRONMENT

Care for the environment is Gorenje's top priority. The new collection of products offer incredible market leading energy savings of up to A+++(-20%). Gorenje are continuously improving energy efficiency by implementing state-of-the-art technology, manufacturing processes and materials that reduce the consumption of waste generated in the production

process and the consumption of energy and natural resources. Gorenje are devoted to searching for modern technological solutions for their products and this has been met with enthusiasm and respect by their environmentally conscious consumers. Gorenje's goal is to produce appliances that use less power, water and detergents.

A VISION FOR THE FUTURE. EXPERIENCE FROM THE PAST.
CREATIVE SOLUTIONS OF TODAY.

INNOVATION

Innovation pushes the limits. But its true value goes further than that: it lies in balancing the expectations of the users and the possibilities of modern technology. Excellence is witnessed by advanced, solidly built and reliable products whose efficiency will convince even those with the strictest of standards. Innovation is Gorenje's way of thinking and the fundamental guideline in development of high-quality and durable products.

DESIGN

The essence of good design is total understanding of the form, which ennobles the products fundamental value. Gorenje devote particular attention to comfort and safety while paying due respect to the aesthetic sense of each individual. Superior quality of materials, ergonomics, and aesthetic harmony reach beyond anything known in the past as they are fused into original design solutions of today.

SIMPLICITY

Understanding of the customers' needs for a quality way of living is the central guiding principle of Gorenje's product development. Convenient solutions exceed the basic expectations with remarkably simple choice of the best-suited programs and settings. The shortest possible route to the desired result is guaranteed, without constraining the possibilities of choice or requiring any effort. Gorenje's quest for affordable convenient solutions that make life simpler.

THE TOUCH OF LIGHT

A contemporary collection distinctive for dynamic design, rounded lines and high-quality aluminium finish. Innovative design and cutting-edge technology leave an impression of colourfulness and versatility. Responding to a gentle touch, MoodLite technology will colour your world in one of the seven hues.

DESIGNED BY

Karim

PINK IS THE NEW BLACK

The six magical changing colours.

BabyPink

HotPink

DeepPurple

SkyBlue

LimeGreen

JuicyOrange

▷ DirectTOUCH

A perfect result in only three simple steps. Patent-pending electronic programming module is a revolutionary novelty in touch screen appliance operation. Numerous preset programmes automatically set the right combination of heating elements, temperature, and cooking time, while additional settings make the use simpler and save even more of your precious time.

A fusion of minimalism and colour. Pure and bold. Functional and inter-active.

A contemporary collection distinctive for dynamic design, rounded lines and high-quality aluminium finish. The magical light of vertical LED-illuminated strip evokes an individual experience of the space.

▽
HomeMADE

The innovative unique design of the HomeMADE oven cavity, featuring a vaulted ceiling and rounded side walls, coupled with precisely thought-out heater placement, delivers superior cooking results. This unique idea is inspired by traditional wood-fired bread ovens relies on highly efficient and fully uniform distribution of hot air.

▽
Induction

The cutting-edge built-in hob boasts speed, low energy consumption, safety, and touch control. The PowerBoost function additionally ups the performance and capacity of the induction built-in hob. The instantaneous response prevents liquid from boiling over and spares you the tedious cleaning.

▽  **Gas built-in hob with a wok burner**

Modern gas hob on stylish white glass, with ergonomically de-signed knobs and excellent layout, is a perfect setting for superior cooking results. The fans of Asian cuisine will be thrilled by the wok burner that delivers three rings of flame, formidable heating power, instantaneous response, and rapid performance.

▽
MoodLite

Aesthetics or functionality? Our cutting-edge technology delivers both. MoodLite technology does not only endow the ambiance with the desired hue of colour; when activated, it also affords a look into the oven interior, while the red tint will warn you of high oven temperature. The light band is both an aesthetic form and an innovative function.

▽
TouchControl

The keys and knobs are a relic of the past; what remains is pure simplicity and aesthetics. The electronic version of the cooker hood is a breakthrough in user-friendly operation. Carefully studied positioning of the control section on the LED-illuminated strip enables simple setting of the extraction power adjustable in four levels.

▽
Halogen lighting

In addition to its primary function of vapour extraction and air filtration, the cooker hood is an additional source of light that provides optimum illumination of the cooker surface. Halogen lighting is also more powerful and economical than the conventional one.

THE NEW CLASIC FOR TOMORROW'S KITCHEN

Minimalistic and elegant. The perfect harmony between elegant glossy surfaces of glass and brushed aluminium handles. For contemporary consumers who appreciate superiorly designed, technologically perfected yet reasonably priced trendy household appliances.

DESIGNED BY ora-ito

www.gorenje-oraito.com

ENFANT TERRIBLE OF DESIGN

To offer the contemporary consumer superiorly designed yet reasonably priced appliances affordable to a wider population, Gorenje has teamed up with Ora-Ïto, the world-famous French designer of the younger generation. His intrepid ideas launched him to the very top of the world of design. His concepts are futuristic and provocative. The result of this cooperation is a trendy range of technologically perfected household appliances - the **Gorenje Ora-Ïto Collection**. Available in **black** and **white**.

Ora-Ïto characterizes his recognizable style as *simplicity*: simple yet complex. With unnecessary surplus taken away, only the clean design lines remain.

▽ Futuristic kitchen

The unique Futuristic kitchen in the shape of a rounded cube was also created in cooperation with Ora-Īto. A monolithic structure made of a high-tech composite material was designed as a fully mobile setting to display the Gorenje Ora-Īto Collection as it clocks up the miles through many European capitals. Throughout its journey it has covered over 14,000 kilometres.

▽ Cooking with your fingertips

The built-in oven is easily controlled via a touch screen neatly hidden in the glass above the oven door, allowing control of the numerous oven functions.

▽ Sensor control

By allowing simple and highly accurate temperature settings, the induction hob enables excellent control of the cooking process.

▽ Glass finish for an exquisitely luxurious appearance

Elegant black or white glass surfaces covering the entire front of each appliance in the collection are in perfect harmony with the design of the wide brushed aluminium handles.

▽ Beauty and power

The exquisite cooker hood is controlled by cleverly concealed sensor controls. Halogen lighting provides perfect illumination right where you need it. The hood also features a class leading extraction rate.

GHS 64 ORA-W
Gas on tempered glass

DESIGNED BY
ora-Īto

- Colour: White
- Chamfered front edge

Control

- Touch control
- Timer function

Features

- BoilControl, prevents pots from boiling over
- StopGo
- StayWarm function

Cooking surface

- 4 HiLight cooking zones
- Left front: Ø 21/17,5/12 cm, 2,3 kW
- Right front: Ø 14,5 cm, 1,2 kW
- Left behind: Ø 14,5 cm, 1,2 kW
- Right behind: Ø 26,5x17 cm, 2,4 kW

Safety and durability

- Residual heat indicator
- Safety control hob lock

Technical data

- Connected load: **7,1 kW**
- Product dimensions (HxWxD): **5,4 × 60 × 51 cm**
- Niche dimensions (HxWxD): **5 × 56 × 49 cm**

- EAN code: **3838942559068**
- Product code: **245929**

simplicity

gorenje

LESS
DECISION
MORE LIFE

The Gorenje Simplicity collection has been created to meet the demands of our customers busy lives. Easy-to-use interaction, minimalist aesthetic relying on quality materials and eco friendly.

DESIGNED BY
Gorenje Design Studio

SIMPLICITY LIFE

Life is complex. Its pace is accelerating. It offers hundreds of choices, demanding ever more decisions. Stealing time. Ignoring simple little indulgencies. STOP! Life could be simple. Adjusted to your own pace. Take less decisions, grab more life. Join the SIMPLICITY trend. Value your time. Save it from tough decisions, control, wasting energy, money. Start living simple.

- **With a single logical knob**

SIMPLICITY offers the most logical choices - the ones, being actually used. Just one attractive knob serves all.

- **With deliberate design**

SIMPLICITY indulges your sight with well considered form and with authentic materials. Saves your energy with ergonomics: without unnecessary movements and time-consuming search of right selections.

- **With cost-effective operation**

SIMPLICITY respects the environment: with low energy consumption, reduced water consumption, and with silent operation.

- **At affordable price**

SIMPLICITY is friendly to your purse: only what is really used, is paid. This is enabled with the state-of-the-art achievements that are built-in the appliances.

▽
Illuminated? Turn the knob to the left.

'You can adjust the intensity of extraction of the Simplicity cooker hood by a simple turn of the knob. If you turn the knob to the left it will also turn on the light. If you turn the knob to the right, the extractor will continue working at the same intensity without the light.

▽
Simple! All clearly visible and accessible.

The cooker hood is the simplest additional source of light above a cooking hob. Easy to access, the extractor fan's easily removable metal grease-filters are dishwasher safe. No fuss!

▽
**Energy:
Save it**

Refrigerators of an A+ standard have excellent insulation, improved door sealants and state of the art cooling components. These decrease energy consumption to a minimum. Save energy, protect the environment and your income.

▷ **Frost free DualAdvance:
No defrosting**

The latest technology prevents frost from forming on perishables inside the freezer. Stop wasting hours on time-consuming defrosting. It simply isn't necessary!

▽
Rather do it tomorrow? No problem.

The machine can be loaded as you go along; the start of the wash, however, can be delayed up to 24 hours.

▽
17 Minutes? Enough for clean laundry.

Modern washing detergents and advanced technology deliver excellent washing results even at lower temperatures and in remarkably short time. Select the »Cotton 30°C« programme - it can be set to be completed in no more than 17 minutes. When the clothes you just can't live without are only lightly soiled, this is the perfect solution for you. What is more, the already low power consumption will be even lower.

WA 714 SYB
Freestanding washing machine

WA 614 SYW
Freestanding washing machine

- Colour: Black

DT 6 SYW / DT 6 SYB

FROM PLAIN
COLD TO
JUST COOL

Superior technology with a brand new image and a charming touch of nostalgia. The rounded convex design is the hallmark of the entire collection of perfectly designed, economical, and environment-friendly state-of-the-art appliances. Discover your retro style! Chic, Vintage, or Funky?

DESIGNED BY
Gorenje Design Studio

Chic

Gorenje Retro Chic collection will appeal above all to those that appreciate modern classics, minimalism with select pieces of elegant furniture; the resolute visionaries who contend that "less is more" and seek perfect harmony.

Vintage

Gorenje Retro Vintage collection will intrigue the nostalgic romantics who love natural colours. The collection will arouse the attention of those who indulge in the pleasures classic arts and love new images with a seasoned character.

Funky

Gorenje Retro Funky collection was created for the playful eternal optimists and curious travellers who just love to be free; the adrenaline lovers for whom sky is the limit.

▽
Large vegetable crisper

Gorenje refrigerators provide optimal cooling conditions for the storage of fruit and vegetables. In addition to maintaining just the right temperature and humidity, certain models also come with a large capacity fruit and vegetable crisper designed to preserve the nutrients and prolong the freshness of your food: a great solution for your weekly shopping.

▽
Fan system

To provide uniformly distributed temperature across the refrigerator, we have installed a fan into the appliance interior. The fan propels air circulation, thus improving the cooling performance. Such system will preserve the food and ready-made dishes for a longer period of time, regardless of which shelf the food is stored on. Furthermore, the fan prevents accumulation of dew or condensate on glass shelves and appliance interior walls.

▽
ECO CARE **A++ energy efficiency**

A bigger volume does not necessarily translate into a bigger electricity bill. In addition to excellent heat insulation, Gorenje fridges and freezers also feature improved door sealing, as well as state-of-the-art cooling system components and refrigeration electronics, all of which are designed to minimise energy consumption. Choosing one of Gorenje's highly energy efficient cooling appliances with energy performance rating A++, A+ or A can bring you energy savings of up to 25%. Appliances which are 15 or more years old, consume up to three times more energy than new ones.

Deep shelves in the freezer door

Innovative shelves in the freezer door make it easy to locate and access smaller frozen items, which are taken out more frequently. Ideal for open packs of frozen vegetables such as peas and green beans, frozen pizzas, ice cream pops and cones... you name it!

▽ Bottle holder

In Gorenje refrigerators, bottles do not take up the space that could be conveniently used to store other items in the refrigerator door racks or on glass shelves; the designated bottle holder ensures optimum use of storage space. In addition, due to its slight inclination, it will safely store even the bottles that have already been opened.

▽ The benefit of glass shelves

Glass shelves in Gorenje refrigerators are made of safety glass. They are highly resistant and can withstand up to 40 kilograms of weight. They are cooler than wire racks. In case of spillage, the fluid will not drip onto the shelf below. Compact glass shelves provide excellent support even to food in small and narrow packaging. Glass shelves are easy to clean.

▽ Deep door bottle shelf

This highly practical shelf enables a systematic storage of items that are taken out of the refrigerator with the highest frequency: upright cartons and 2 litre bottles can be stored in the deep holder at the back while smaller items and jars can be placed in the shallow holder in the front. The shelf is positioned in the most accessible, easy-to-see spot, which also makes it within easy reach of children.

gorenje

WHITE SENSATION UltraWHITE

Innovative UltraWhite program, specially adjusted to the type of laundry, harnesses expert knowledge and experience of Gorenje experts. In combination with the right choice of washing method SensoCARE it is a witness to the excellent understanding of the modern needs of the consumers. Washing machine efficiency is based on the SensorIQ technology that automatically optimizes the washing process and provides safe operation. Perfect care of your laundry is delivered in the shortest possible time and with minimum energy consumed.

- Excellent A+++^(-20%) energy efficiency.
- Logical choice of programs and other settings
- SensoCARE - 4 washing modes
- Special programs adjusted to the type of laundry
- Carefully thought-out ergonomic solutions
- High-quality, durable materials and components
- Carefully thought-out ergonomic solutions
- High-quality and durable materials and components

PERFECT WHITENESS

Highly efficient laundry care

Perfect laundry care requires the right combination of temperature, water, time, tumbling rhythm, and detergent. Gorenje experts relied on years of experience and their expert knowledge to devise an innovative solution for efficient care of laundry.

UltraWHITE program

Preserving the whiteness of your delicate laundry. UltraWHITE program is intended for care of white delicate laundry such as synthetics, silk, nylon, lace, which, due to the specific character of the fabric, cannot be washed at high temperatures. The laundry will receive excellent care at a temperature of no more than 30°C, owing to adjusted tumbling rhythm and more water. Regular white laundry would take on a greyish or yellowish appearance and lose its white sheen. UltraWHITE program will make sure your white laundry actually stays white.

UltraWHITE

Excellent energy efficiency

Many innovative solutions like the efficient program algorithms, OptiDrum washing machine drum, and QuickWet efficient soaking system, combined with the intelligent SensorIQ sensor technology deliver excellent energy efficiency. Gorenje's top models boast A+++^{-20%} rating, which means they use half less power than an A energy class appliance.

9 kg XXL load

The Ultra large-capacity can take up to 9 kg of laundry, allowing you to optimise your loads while also ensuring perfect washing results. The ergonomically designed, extra large 34 cm porthole door makes it much easier to load and empty the drum even when washing blankets, bedding or other larger laundry items. On selected models, a light comes on inside the drum when the door is opened, making it easier for you to inspect the content.

StainExpert

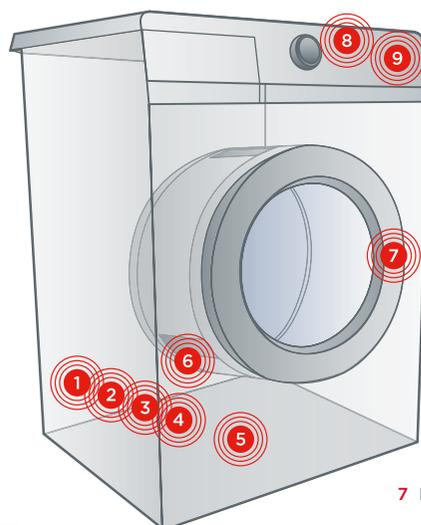

Assistance in dealing with the most stubborn stains it may often be the case that inappropriate washing method will additionally work a stain into the fabric, reducing the possibility to remove it in subsequent washes. Gorenje's high-end models offer a special function for effective removal of the most common stubborn stains. Choose the most appropriate among the four offered groups of stains to make sure the laundry is washed effectively.

- **Fruit:** oranges, strawberries, bananas, tomato sauce, fruit mashes etc.
- **Coffee:** tea, coffee, cocoa, chocolate, yoghurt, pasta, lipstick etc.
- **Wine:** red wine, dark fruit juices, blueberries, red beet, ink etc.
- **Organic:** fat, oil, butter, eggs, blood, grass, etc.

TimeComfort

The laundry is washed when you want it. Most washing machines offer the option to delay the start of the washing cycle by up to 24 hours in advance. In addition to the **StartDelay** function, high-end models offer the **EndTime** function allowing you to set the time you wish the washing cycle to end. The machine will, depending on the selected program, automatically calculate the right washing start time. You will be able use lower night power rates as well as make sure the laundry is washed at a time that is convenient for you to dry it.

- 1 Load sensor, 2 Stability control sensor, 3 RPM sensor, 4 Motor temperature sensor, 5 TotalAquaStop sensor, 6 Temperature sensor, 7 Door lock, 8 Hydrostat, 9 Water level sensor

SensorIQ sensor technology

Always optimum use of power, water, and time. Gorenje washing machines feature numerous sensors that continuously monitor the washing progress. Based on the information collected, the intelligent SensorIQ technology automatically adjusts the washing process to the selected program, type, and weight of the laundry. Optimum results, in addition to considerable savings in power, water, and time, are guaranteed.

TotalWeight control - Automatic recognition of laundry weight

Using a weight sensor, the washing machine automatically adjusts the washing program to the actual amount of laundry in the drum. In addition to savings in water and power, it also allows silent and quiet operation of the machine and prolongs the appliance's useful life.

OptiDrum - easy movement for your laundry

Gorenje washing machines look after your laundry with an innovative designed drum. Large volume allows for movement even when washing larger amounts of laundry. Drum perforation is carefully thought out so that the size, shape, and number of holes provide lower water and power consumption. Wave-shaped 3D ribs gently move the laundry towards the rear part of the drum and then lift it towards the top. Tilted design of the interior door glass also contributes to this process. OptiDrum will make sure your laundry gets the best possible care.

SterilTub - Clean machine for clean laundry

The solution for pleasantly smelling laundry. Washing at lower temperatures with non-aggressive environmentally friendly detergents allows the bacteria lurking in the washing machine tub to develop. These bacteria can cause laundry that may have been normally washed and dried to emit an unpleasant odour as soon as it comes into contact with moisture. SterilTub program will make sure your washing machine interior is impeccably clean to allow the best care of your laundry.

FRIENDLY TECHNOLOGY

Simple control

Laundry care in only three steps Ergonomically designed tilted control panel provides excellent view and control over the washing process and the selected settings. Further more, it allows simple choice of the right program, washing mode, and other special settings. The steps are arranged in a logical sequence, from left to right. Centrally positioned programme selector on the control panel allows perfect grip; turning it to the right, you may access the most commonly used programs. In high-end models, these are followed by an LCD display offering four different washing modes. Lastly, additional functions are offered; when these are selected, all that is left is to press the Start button. LCD display offers the possibility to set your own language, choosing from 33 preset options.

NEW GORENJE WASHING MACHINES WITH REMARKABLE CAPACITY OF 9-KILOGRAMS

▽
The ultra large drum allows the laundry to tumble comfortably, which leads to better washing results and less creasing. Regardless of the amount of laundry, washing effect will be excellent even with smaller loads.

Therefore, the ever efficient use of water, energy and time will make Gorenje's new 9-kilogram washing machines an excellent choice for large and small households. Heavy duty, flexible, economical, and reliable!

Washing machine with the **largest drum volume** among the 9-kilogram models in the market is still within **standard dimensions** and will therefore fit any home.

Amount of laundry washed in 6 kg washing machine (left) and 9 kg washing machine (right).

▽ High capacity even for a diverse load of laundry

New program choices offered by the new 9-kilogram washing machines and more efficient detergents that deliver the desired effect at low temperatures allow you to wash a diverse batch of laundry at the same time better and safer than ever. Without waiting until a sufficient amount of laundry of a particular colour or fabric piles up.

▽ New convenience for the largest items.

Large items like blankets, spreads, and covers which you are used to taking to the dry cleaners can now be washed at home. Loading and unloading are made simple by the door opening with a diameter of 34 centimeters and the door that opens to a 180° angle.

gorenje

SOFTNESS SENSATION UltraSOFT

Laundry dryers boast cutting-edge drying and crease prevention procedures. SensorIQ intelligent sensor technology optimizes the drying procedure and thus excellently preserves the laundry while keeping power consumption very low. You may choose between regular NormalCARE drying and the temperature-adjusted GentleCARE method. Programs tailored to modern lifestyle and additional settings make sure the operation is safe and that your laundry is excellently preserved.

- SteamTech steam drying technology
- IonTech straightening the fabrics by an air ionizer
- TwinAir bi-directional air blowing system
- SensoCARE adjusted drying program
- Condenser dryer fitted with a heat pump
- Extra large drum volume 120 l

EXCEPTIONAL RESULTS

Condenser dryer with a heat pump

Exceptionally economical drying Condenser dryer with a heat pump dries the laundry at a lower temperature than the conventional models, which additionally preserves the clothes. It is the only home appliance to use both the cooling and the heating part of the heat pump. Full use leads to up to 40% reduction in energy consumption relative to the A class.

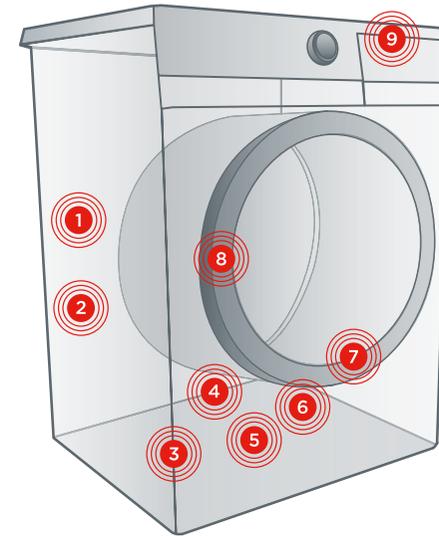

SteamTech - perfection without ironing

Perfectly smoothed and freshened laundry. New technology in laundry care employs steam to straighten every crease and wrinkle. Ironing your cotton and mixed fabric laundry will now be much easier - or even not required at all! An independent remarkable steam drying program for shirts will particularly please those who strongly dislike ironing. Simply place up to five clean shirts into the dryer; it will take only 20 minutes to dry them and remove all creases using steam. Refreshment program is perfect for clothes that have recently been worn but are not ready for washing yet, or clothes that have been in the closet for a while. It will remove any unpleasant odour and make them soft, without washing.

| SteamTech programmes | Programme description |
|----------------------|--|
| Shirts | This programme can dry up to five washed shirts and treat them with steam so that they can be stored in the closet immediately after drying. |
| Cotton | Refreshment and smoothing of the creases on dried cotton laundry. |
| Mix | Refreshment and smoothing of the creases on dried mixed fabric laundry. |
| Synthetics | Refreshment and smoothing of the creases on laundry with synthetic fibres. |
| Bed linen | Refreshment and smoothing of the creases on bedding. |
| Refreshment | Steam treatment of laundry that is not dirty, but needs refreshment (e.g. seasonal clothes that were stored in the closet for a while). |

1 Thermo fuse, 2 Self resetting thermostat, 3 Heat exchanger temperature sensor, 4 Motor temperature sensor, 5 Air temperature sensor, 6 Compressor temperature sensor, 7 Humidity sensor, 8 Door switch, 9 Water level sensor

SensorIQ

Your laundry dried just right every time! SensorIQ intelligent technology automatically adjusts the drying process according to the selected program, type of laundry, and desired level of dryness. The moisture/humidity sensor continuously adjusts the drying time to the moisture level in the laundry. When the sensor perceives that the selected level of dryness has been reached, it automatically stops the dryer. The clothes are just right for ironing, dry, cupboard dry, or very dry - as you like it.

 **SensoCARE technology**

Customized drying Gorenje dryers allow you to select the drying method that is the most convenient for you.

NormalCARE includes optimized drying programs for all types of laundry. For even friendlier laundry care, you may select **GentleCARE** which allows drying at lower temperature to preserve your garments.

▽ **Simple control**

Desired results in only three steps Ergonomically designed control panel allows simple control of the drying process; the steps follow from right to left. Most commonly used drying programs are placed on the left side of the control dial. Next to the dial, there is the section with additional settings such as delayed start of the drying cycle or drying at low temperature, supported by LED indicators and an LCD display. The control panel ends with the start and pause button on the left hand side of the dryer. Such design of the control panel allows the user a simple and friendly drying experience.

BIG VOLUME AND UP TO 9 KG LOAD

More dry laundry at a time

Gorenje dryers can take up to 9 kg loads; in terms of capacity (120 l), this makes them superior to other comparable products on the market and ensures optimal drying of larger loads. The door that opens out to a full 180 degrees and conveniently large, 35 cm wide door opening makes it easier to load and empty the drum when drying large items such as blankets, curtains, covers or cushions. Some models have also been fitted with a LED light inside the drum, which allows you better overview and easy process of loading and unloading.

Easy-to-clean filter

For optimal drying performance, regular cleaning of the filter and emptying of the condensed water container is required. The filter, conveniently positioned on the dryer door, is easily accessible and its ergonomic design makes it just as exceptionally easy to clean.

EFFICIENCY FOR SHINY DISHES

Optimum use of water and high energy efficiency are the features that distinguish our dishwashers. Convenient consumer friendly programs and functions upgrade the making it possible to wash up to 14 place settings at one time. Innovative stainless steel interior affords high flexibility in arranging the dishes.

- AAA efficiency
- Convenient dishwashing programs
- Ample space with cleverly adjustable baskets

DISHWASHING EFFICIENCY

Short turbo programme QuickIntensive

The selected programme allows you to halve the time required to do the dishes by optimising the stages of the dishwashing cycle. This way, the desired effect is also achieved at full load with your dishes done cleaned and with outstanding results.

Automatic programme selection

The most sophisticated models feature an automatic programme that enables you to wash your dishes within two temperature ranges (party glassware or fine porcelain at a lower temperature, and other, less fragile dishes at a higher temperature). The sensors continually monitor the water in the dishwasher, identifying impurities and adjusting their operation accordingly, so as to deliver perfectly clean dishes whilst also ensuring the optimal consumption of water, energy and time.

Self-cleaning filter

The automatic filter cleaning system washes out the food residues to prevent the filter from clogging. This prevents any problems or errors.

AquaStop anti-flooding system

With the AquaStop safety feature, the dishwasher can be safely left to operate at night as well as in your absence. In case of leakage or flooding, AquaStop automatically cuts off the water supply while the pump siphons the residual water out of the dishwasher basin. AquaStop remains fully functional for the duration of the working life of the appliance.

Stainless steel interior

Dishwasher interior is made of stainless steel which provides a long useful life and simple cleaning.

3 in 1

Simply by activating the "3 in 1" function, your dishwasher will automatically detect which type of detergent you are using. If you are using a tablet, the dishwasher will adjust the washing cycle and omit using the rinse aid, making this function highly convenient. If you are using powder or gel detergent, the rinse aid is released to allow optimum dishwashing results and perfect shine.

Delay start

Some Gorenje dishwasher models also incorporate the Delay Start feature, which effectively enables you to set the time of the dishwashing up to 24 hours in advance. This function provides an opportunity for additional savings by allowing you to time your dishwashing so as to coincide with the low electricity rate.

LONG LASTING FRESHNESS

The Gorenje range of built-in and freestanding cooling products boast carefully thought out interior with the new "VitroLook" aesthetics which, in addition to excellent view and access to the contents, offers easily intelligible icons to discretely suggest the most appropriate storage area for each type of food.

- High energy efficiency: A+++
- Accurate SensoTech temperature control
- Functionally designed interior
- Innovative solutions for prolonged food freshness
- Varied choice of models tailored to the user

ULTIMATE STORAGE

ULTIMATE EFFICIENCY

► Ideal climate for storing food

Different foods demand different storage conditions. Combined Gorenje refrigerators provide 5 temperature areas to help prolong the freshness of your food and prevent the loss of valuable nutritive substances.

8 °C: bread, pastry, butter, jam, cooked meats, canned food and exotic fruit.

5 °C: dairy products, fruit juice, cooked food, desserts, cheese, pudding, eggs, yoghurts and some kinds of fruit (e.g. melons and watermelons).

- 12 °C: ideal for the storage of smaller packs, small frozen vegetables, ice-cream cones, ice cubes .

- 18 °C: optimal temperature in the freezer drawers for the storage of frozen items.

PERFECT CLIMATE

SensoTech electronic temperature regulation

Electronic control allows accurate settings of cooling and freezing temperature and constant control over them, independently of the environment temperature. Advanced models also feature separate temperature regulation for the refrigerator and freezer compartment, as well as a LED temperature display. In addition to the core functionality, these models offer the FastFreeze freezer boost function and the SuperCool refrigerator boost function which will prove convenient after major shopping trips. A dedicated signal light, combined with an acoustic signal, will warn you of any increases in temperature in the appliance. Most models also offer the Eco power savings program. This way, the food will receive optimum care while you save power.

FastFreeze rapid food freezing

Maintaining the quality of frozen food depends largely on how fast the freezing process is. When the freezing process is faster, the crystals that are formed are smaller and do not damage the cells in the food, thus allowing it to retain the vitamins, minerals and nutrients longer. For a true freezing boost, choose models with the **FastFreeze** function that freezes the food at extremely low temperature, below -24°C . If the function is not deactivated manually, the fast freezing process is ended automatically after a certain period of time and the freezer returns to the initially set temperature.

Eco - economy program

During periods of less frequent use (door opening) or absence from home, such as vacation, Eco program can provide optimum temperature while saving power.

SuperCool function for cooling larger amounts of food

When the **SuperCool fast cooling** function is activated, the refrigerator will provide a boost to the cooling process, dropping the temperature to just above the freezing point. Low temperature, combined with large volume, is ideal for rapid cooling of food after major shopping trips. After six hours, the function is switched off automatically and the refrigerator compartment temperature returns to the initial setting.

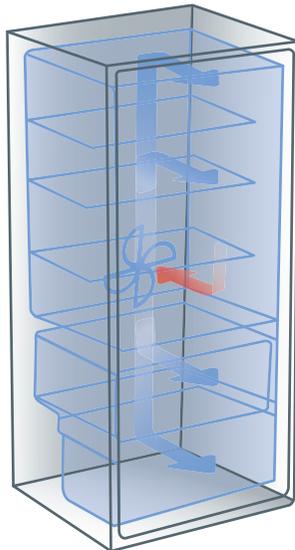

Constant temperature in the refrigerator

Due to the refrigerator ventilator, which is built in the back wall of the refrigerator, the cold air inside the refrigerator is constantly circulating. This provides quick and even cooling of the entire refrigerator and at the same time reduces the accumulation of condensation on the back wall and under the shelves. This creates ideal storage conditions for all kinds of foods, which stay fresh longer.

MultiFlow technology

MultiFlow accelerated air circulation technology provides a constant temperature in all models with a ZeroZone drawer. Cool air is blown through the vents in the refrigerator back wall directly into the drawer. Compared to conventional systems, MultiFlow delivers the most efficient cooling of food, keeping the freshness, aroma, and nutrients of fruit, vegetables, and meat much longer.

FreshZone compartment for perishable food

The next generation of fridges features a FreshZone compartment designed to preserve and lock in the freshness of highly perishable foods. A fan blows cold air directly into the compartment so that the temperature inside is the lowest possible within the fridge. As a result, fruit, vegetables and meat remain fresher much longer.

Fast bottle chill

When selecting the **fast bottle chill** option, the MultiFlow system blows chilled air through vents in the back wall, cooling your drinks much faster. The bottles are placed in a special, removable holder made of non-corrosive metal. When removed, the bottle holder can double up as a wine bottle tray for the wine which should be stored at room temperature.

MoistControl - humidity control in the vegetable drawer

Gorenje refrigerators offer the possibility of controlling the humidity in the vegetable drawer. A simple slider is used to control the humidity in the drawer to make sure your vegetables stay fresh and crisp. The drawer is mounted on telescopic guides which allows full stability when it is pulled out and affords excellent view of the contents.

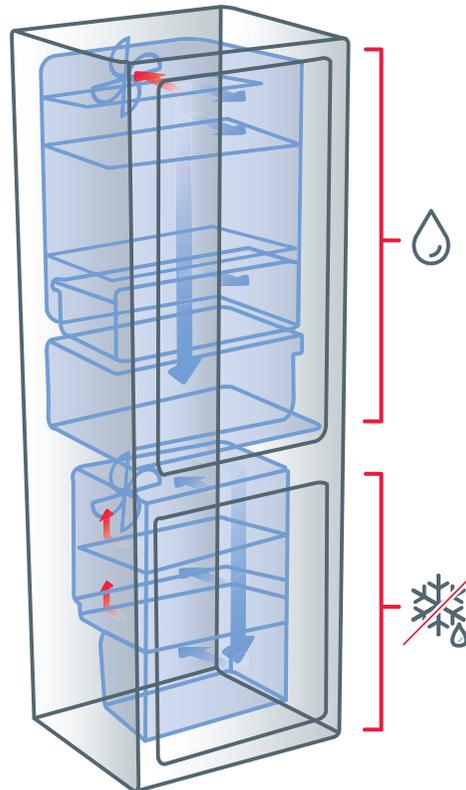

COMFORTABLE STORAGE

Frost free DualAdvance - no more laborious defrosting

Modern Frost Free DualAdvance technology evacuates the humidity from the freezer by employing intensive circulation of cool air, to prevent accumulation of frost on the food and interior walls. Tedious defrosting and cleaning of the freezer is a thing of the past.

- Frozen food will not stick together;
- Space usage and clarity of view over the food in the freezer are improved;
- Quality, colour, and aroma of frozen food is maintained.

In addition to upright freezers, Gorenje also offers this technology in combined refrigerator freezers where it is employed to maintain optimum storage conditions for fresh food in the refrigerator compartment as well.

- Fully separated cooling and freezing process;
- No exchange of odour between the freezer and refrigerator compartment ;
- Optimum humidity in the refrigerator compartment;
- Fresh food will not dry out, which prolongs their quality.

▽
Frozen in regular freezer

▽
Frozen in freezer with NoFrost technology

▽
Sliding shelves

Innovative sliding shelves are a novelty in the cooling appliance market, allowing you ready access to the stored items and providing a better view of the contents. The shelves feature seamless lipped edges, which retain spills and prevent them from contaminating the shelves and items below.

▽
Changeable shelf

A split top shelf in selected models allows you to further optimise the available space in your fridge. The shelf can be used as an ordinary shelf or it can be divided into two smaller shelves, which can then be placed one under another. This way, you can create a space for storing taller containers or bottles

▷ **Deep door bottle shelf**

This highly practical shelf enables a systematic storage of items that are taken out of the fridge with the highest frequency: upright cartons and 2 litre bottles can be stored in the deep holder at the back while smaller items and jars can be placed in the shallow holder in the front. The shelf is positioned in the most accessible, easy-to-see spot, which also makes it within easy reach of children.

FIU 6091 AW

CULINARY PLEASURE FOR EVERYONE

Owing to their innovative solutions, Gorenje built-in ovens and freestanding cookers rank at the very top of the European appliance market. Numerous combinations of hobs and efficient design of the HomeMADE oven provide excellent cooking results. Special consumer friendly features and ergonomic design additionally simplify the cooking and baking process.

- Huge range of models
- HomeMADE: efficient oven cavity shape modelled on the traditional wood-fired ovens
- Optimum combination of cooking systems and special functions for the best cooking results
- Market leading energy efficiency A^{-20%}
- High quality materials with well researched ergonomics resulting in ease of use, maintenance and safety

HomeCHEF

HomeMADE oven. A unique innovation modelled on traditional wood-fired bread ovens!

With great insight, a vaulted oven design for superior baking results typically associated with traditional wood-fired bread ovens! An innovative design solution for the next generation of Gorenje built-in ovens involves a precise positioning of the heating elements for perfect baking. Smooth, rounded edges on the rear panel and vaulted interior ensure a more efficient circulation as well as an even distribution of hot air inside the oven. The result is evenly baked, succulent yet crispy dishes; soft bread with a perfect crust; many of your favourite foods cooked just right - the way that until now you could only dream of. Gorenje's original and insightful approach to oven design is homage to traditional experience and the result of a fruitful cooperation with renowned research institutions. A unique feature with a tint of ancient wisdom!

HomeMADE

DirecTOUCH, perfect results at your fingertips

This innovative patented electronic programme module has virtually revolutionised the touch-screen operation of the next generation of Gorenje hobs and built-in ovens. Three simple steps is all it takes - cooking has never been easier! After turning the oven on, make your selection by touching the symbol indicating the dish you want to cook, then press "Start". Numerous preset programmes automatically set the right combination of heating elements, temperature and cooking time. Large and clearly recognizable symbols make the oven

easy to use while still leaving you the freedom to set all cooking parameters (heating element, temperature, cooking time, meat probe) according to your preferences and cooking ability. Your favourite settings can be stored in the memory and simply recalled when you use the oven next. A child safety Lock is an additional advantage of the electronic module preventing unsupervised use of the oven and providing added protection from injury.

▷ Global innovation - step baking

Gorenje HomeChef oven is a revolutionary feature in home appliances. Unique control and efficient operation guarantee remarkable cooking results. One of the key features of the HomeChef oven is the pre-set **STEPbake** feature which allows cooking in several steps. The preparation process for many dishes requires a change of temperature during the progress, or use of different types of heating elements, or both. With the HomeChef oven, you can design such preset programs yourself. Choose the **PRObake** operating mode for a perfect gourmet experience.

In addition, there are three more operating modes:

AUTObake with as many as 65 preset recipes with photos, including some that already include cooking in several steps;

MYbake for all creative minds that come up with their own recipes; these can be easily modified or saved from scratch;

SIMPLEbake is the shortest way to one of the 9 most frequently prepared dishes.

The HomeChef oven is an excellent choice for beginners and seasoned chefs alike.

Bon Appétit

HomeCHEF

reddot design award
honourable mention 2011

HomeCHEF

SIMPLEbake The shortest way to your favourite dish

When the **SIMPLEbake** mode is displayed, nine photos of the most commonly prepared dishes will appear on the interactive colour display. When the desired dish is selected, the preset program will already have known which heaters to use, which guide level the baking tray should be placed in, and how long to cook. The program automatically makes all the necessary adjustments with regard to the approximate amount (weight) of the food, which you enter, level of browning and doneness, and the time you wish your food to be ready. HomeCHEF will guide you logically through the scrolling, browsing, and confirming of your settings.

PRObake Conventional cooking for seasoned chefs

The **PRObake** mode allows the chef all the freedom of creation while improving reliability and accuracy of all procedures. If you know from experience the temperature and duration of cooking for a particular dish, as well as which heaters and any additional functions are best suited, then PRObake is the right cooking mode for you.

STEPbake

The original and patent-protected solution of multi-step cooking available within the PRObake mode, allows setting up to three consecutive changes in temperature and heater combination in respective time intervals. When the recipe for your desired dish recommends such changes during the cooking process, all required settings can be very simply made immediately, before the start of preparation. Cooking in such way takes place automatically, without the need for constant control, and provides excellent culinary results each time.

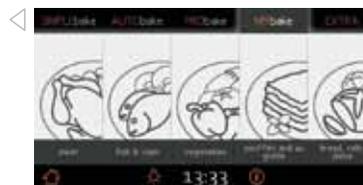

AUTObake Wide choice of preset programs

AUTObake mode offers preset optimum settings for 65 dishes classified into logical categories. Select the food category, e.g. meat, vegetables, or pastry, and the desired dish within the category. The program inquires about the approximate amount, desired level of doneness, and the time of completion of cooking. Then, you are ready to launch the cooking process by pressing Start. The program will adjust the settings accordingly and make sure the food is ready and delicious at the time you chose.

MYbake Creative combination based on your experience

The **MYbake** mode allows keeping and editing an electronic recipe book with up to 150 different dishes, by including preset recipes and saving your own combinations. Memory program offers 10 food categories such as meat, fish and other seafood, vegetables, bread, etc. Up to 15 recipes and procedures for their preparation can be stored in each category. You may also store your favourite dishes from the AUTObake program, or any dish for which you have defined the best procedures yourself with the STEPbake function within the PRObake mode. The saved settings are always only a simple touch away

EXTRA Extra functions

- **Fast Preheat** - rapid oven preheat
- **StayWarm** - keeping your food at just the right temperature after it is done
- **WarmPlate** - heating the plates before serving warm food
- **FoodDefrost** - defrosting frozen food
- **MeatProbe** - the option to use the meat probe
- **AquaClean** - cleaning your oven with water

BAKING EFFICIENCY

Superior knob- and handle design

Ergonomic knob design not only ensures a firm grip and prevents your fingers from slipping, but also makes it easy for you to monitor the situation and stay on top of things at all times. More advanced models come with 'push-pull' knobs. When the oven is switched off, the controls simply retract into the control panel for additional safety and ease of cleaning, not to mention superior aesthetic appeal of the sheer, smooth surface. Metal handles on the oven doors feature a superior, ergonomic design for an extra firm grip.

EPT-controlled features:

- Electronic program timer
- Duration
- End of cooking time
- Minute minder
- Acoustic signal
- Child lock

EPT+TD-controlled features:

- Electronic program timer
- Duration
- End of cooking time
- Minute minder
- Acoustic signal
- Child lock
- Temperature display
- Temperature selection

EPT+TD plus-controlled features:

- Electronic program timer
- Duration
- End of cooking time
- Minute minder
- Acoustic signal
- Child lock
- Temperature display
- Temperature selection
- Indication of currently used heating system
- Meat probe

▷ Touch control electronic programming timer

Gorenje ovens feature innovative, sensor controlled electronic timers. Touch control enables you to set the cooking time and select the right temperature, which can be monitored on the control panel display during the entire cooking time. An alarm sounds at the end of cooking time. The surface of the innovative electronic timer is perfectly smooth, which makes it extremely easy to clean. The new electronic programming timers – Gorenje's latest innovation for a user friendly operation!

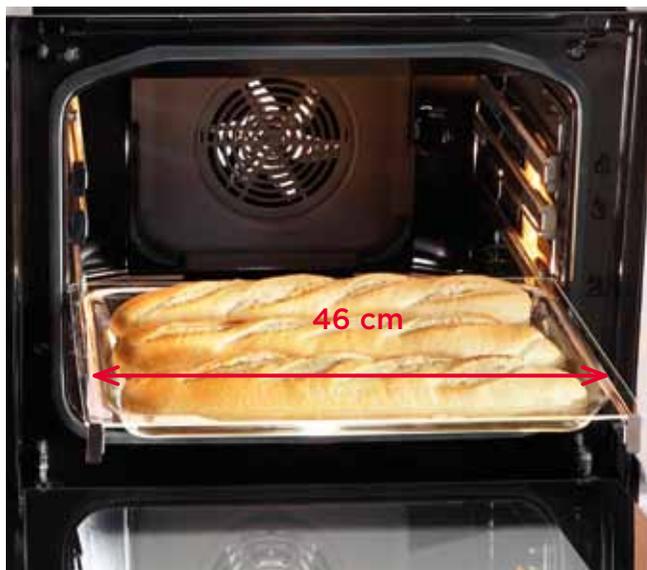

BAKING EFFICIENCY

▽  **BigSpace,
large oven capacity**

With their 65-litre useful capacity Gorenje ovens are among the biggest on the market and can easily accommodate even a 7 kg turkey. Despite its super-size capacity the oven boasts A^{-20%} energy performance and is one of the most energy efficient ovens presently available on the market, due to its superior design. Ideal for making several dishes at once and for bigger family reunions and dinner parties held at home!

▽  **Super-size
baking area**

The 46cm wide oven cavity offers a 15% larger baking surface, which is the result of a fresh approach to oven design. Making the most of the available oven width makes it possible to fit larger quantities of food on a single tray, both when it comes to single-rack as well as multi-rack cooking. A highly efficient design of the top heating element ensures a uniform distribution of heat across the entire tray surface which translates into perfect baking results.

▽  **OpenView,
excellent visibility**

In selected models super-size oven capacity is further complemented by double lighting. Coupled with an all-glass oven door this feature ensures a significantly better overview of the interior, making it easy for you to supervise the cooking process from a safe distance.

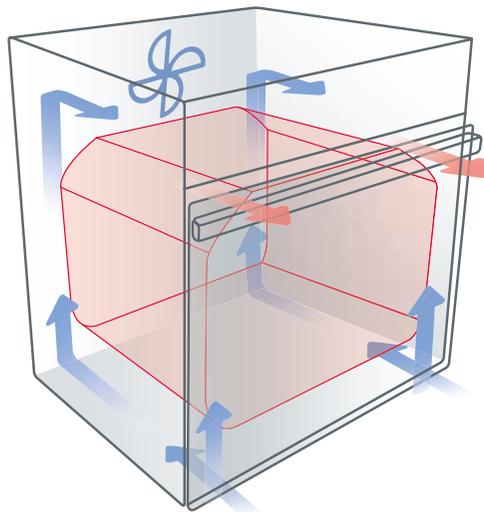

▽  **PerfectGrill
for a perfect crust**

The large upper and the smaller lower infrared heating elements are safely hidden in the depths of the recessed, vaulted oven ceiling while the difference in their relative heights ensures that food is cooked evenly and perfectly, every time. In selected models the upper heating element can be tilted down, which makes the oven easier to clean.

Baking on several shelves set at different levels

By choosing a Gorenje oven you can bake your biscuits up to three different levels at the same time. Fan at the rear of the oven ensures an even and swift distribution of heat. This enables a more efficient circulation of hot air and delivers outstanding cooking and baking results while saving you valuable time and energy.

Extra-deep, XXL baking tray

For gourmets who enjoy making home-made bread, lasagne, quiches or similar, we have designed a special, extra deep 5 cm baking tray. The tray features EcoClean enamel coating, which makes it easy to clean. In addition, the oven walls tend to get less dirty as the raised tray sides prevent the fat from escaping. Our large selection of baking trays also features traditional size enamelled and glass trays. The latter can also be used as serving trays.

Cool oven panels with DynamiCooling

A highly efficient cooling system designed to keep the temperature of oven panels down during the cooking process (DC) as well as afterwards (DC+) ensures significantly cooler outer surfaces of oven panels. A fan mixes cooler ambient air with the hot air in the oven, forcing the cooled mixture to circulate right under the exterior panels of the appliance. Once the oven has been switched off, a heat sensor keeps the fan going until the oven temperature has dropped below 60 °C (DC+). By keeping the temperature of the oven panels and door down, DynamiCooling significantly improves the safety of oven cooking.

Temperature probe

Selected models of Gorenje ovens are fitted with a temperature probe – a special sensor allowing you to control how done your food is. Insert the probe into any larger chunk of food to be baked, roasted, or grilled, and set the desired temperature. The display on the oven control panel will indicate when the food is done exactly as you want it. Hence, your roast will be deliciously juicy, and the dough will be perfectly leavened and baked.

ChildLock for safety

The ChildLock function prevents children from interfering with or resetting the selected parameters, thus also providing protection against accidental activation and operation of the hob.

Low temperature of the oven door

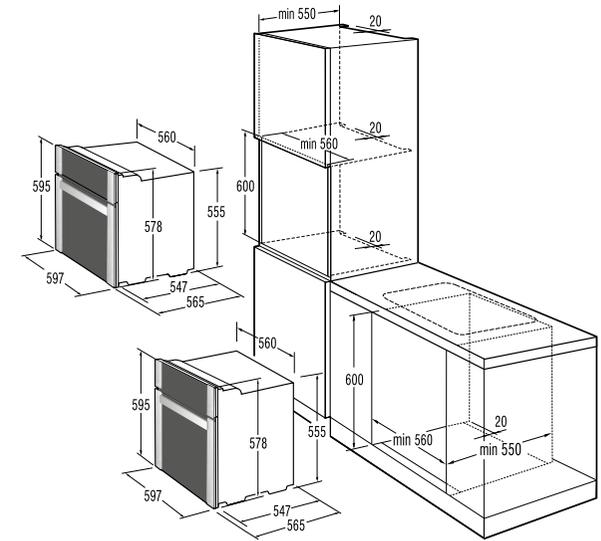

Gorenje ovens are fitted with safe and energy efficient CoolDoors (CD). More sophisticated models feature triple-glazed, heat reflective UltraCoolDoors (UCD). Superior door insulation in conjunction with special reflective glass layers improves oven performance together with significantly lower energy consumption. A low exterior door temperature keeps you safe from burns when touching the oven door.

Safety switch

Oven door safety switch prevents damage and burns as it makes it impossible for the children to open the oven door during cooking.

CUSTOMIZED COOKERS TAILORED TO YOUR NEEDS

Gorenje's wide range of cookers has been designed to deliver superior culinary performance. Whether electric or gas, the new cookers are available in 50 cm or 60 cm size. Ease of operation is ensured by a perceptive design, slender and ergonomic form of the control knobs and an easy to use electronic programming timer. More sophisticated models feature finger touch controls (oven and hob), which makes cooking and baking even easier.

COMBINED STEAM OVEN

Cooking in compact combined steam oven retains full flavour of the food, vitamins, and nutrients. Simple control of many preset programs and convenient functions allow preparing quality and balanced meals every day.

- High energy efficiency: A

- **SteamPower: innovative steam cooking system**
- **11 combined functions**
- **Pre-selected, changeable recipe book**
- **Lavish oven equipment**
- **Possibility of upgrade with a warming drawer**

Combined steam oven

A combined steam oven offering the possibility of preparing food with steam or hot air or even a combination of both! In addition to the numerous preset programmes and the various cooking functions, the oven distinguishes itself by a simple and comfortable touch-screen operation. The screen can display the functions in eleven different preset languages, while advanced built-in functions maximally simplify the oven's maintenance.

Warming drawer

The functionality of the steam oven can be further upgraded by the addition of a separate warming drawer. The drawer is installed right under the steam oven, fitting perfectly into the furniture element designed for classic built-in ovens. The drawer can be used to both heat crockery as well as keeping food warm.

MICROWAVE TECHNOLOGY

Superior defrosting and browning in microwave mode

The CyclicDefrost option featuring a random sequencing of the microwave pulse energy penetrates the food from the inside, defrosting it more evenly and more quickly. The Turbo baking feature used in conjunction with convection heating using hot air and grill will help you produce crispy, golden brown goodies, which until now was just about impossible to achieve in a microwave. The exceptional functionality of this microwave oven offers you a variety of choices when it comes to preparing food:

- defrosting and reheating
- combined use of grill and convection heating
- combined use of microwaves and convection heating
- roasting/cooking in convection mode, without microwaves.

Multi function ovens: microwave, convection and grill

Gorenje built-in microwave ovens bring you all the advantages of microwaves, convection and grill, while their combined use opens up a whole new world of culinary options and experiences. There are six different power level settings to enable the microwave to speed up your cooking, while active convection (heating the oven up to 250 °C) ensures perfectly even cooking results every time. The option of simultaneously using the grill and convection heating is particularly handy when preparing a roast, while the combined use of the grill and microwaves can be used to great effect when cooking smaller cuts of meat, pizza and many other foods.

winner 2012

IQCook

THE GENIUS COOKING REVOLUTION

Revolutionary IQ sensor technology

Top class induction hob IQCook: cooking made easy in a revolutionary way! Innovative technology of IQ sensors built into the cooking zones and mounted on the cookware lid guarantees completely safe and controlled hob operation. Preset cooking modes additionally simplify the preparation of many dishes. But there is more! IQCook hobs are based on the generation of the most powerful XtremePower induction hobs. These hobs deliver remarkable cooking power. Patented solution tailored to suit the user, combined with a technologically perfected induction hob!

Preset cooking modes

Preset operating modes are a remarkable feature. They allow automatic preparation of a wide range of dishes. Another unique function is steam cooking which preserves the food's nutrients, vitamins, firmness, and full natural flavour.

Three preset cooking modes using the lid on the pot:

- **IQsteam** - steam cooking
- **IQboil** - cooking with large amount of water
- **IQpro** - slow cooking

Two preset frying modes:

- **IQfry** - frying
- **IQgrill** - grilling

100 % AUTOMATIC COOKING CONTROL Using the IQ sensors

Proven and reliable IQ sensors automatically control the operation of the cooking hob without the need of constant monitoring over cooking. IQ sensor, built into the lid of your cookware, will control the cooking progress in the pan and automatically regulate the temperature and hob power in communication with the sensor built into the cooking zone. Automatic hob operation with the IQ sensors! 100 % DELICIOUS!

UP TO 40 % ENERGY SAVINGS With full parameter optimization

IQCook cooking hob will optimize the temperature throughout the cooking process to achieve considerable energy savings. Full optimization of all cooking parameters! SAVE UP TO 40 %!

100 % SAFETY From boiling over and burning

SmartSense patented safety function will prevent the food from boiling over or burning. By communicating with the IQ sensors, the cooking hob will perceive if the liquid evaporates and consequently automatically switch off the hob. No more boiled over or burnt food. 100 % SAFE!

IQboil: Cooking with a large amount of water

This cooking mode is suitable for dishes that require a large amount of water such as soups and pasta. Preset cooking mode will bring the contents of the pot to the boil and then maintain the boiling temperature through communication with the IQ sensors. Choose between light, moderate, and heavy boil.

100% JUICY!

IQpro: Slow cooking

This cooking mode is adapted for farinaceous dishes that require a longer cooking time with slow preheating and light boiling, such as goulash, milk, rice soufflé, pudding, and polenta. Also appropriate for reheating previously prepared and precooked food.

100% FLAVOURFUL!

IQfry: Frying

Preset mode for frying with a large amount of oil. Appropriate for frying doughnuts and French fries/chips. 100% CRUNCHY!

IQgrill: Grilling

This convenient preset grilling mode allows choosing between three levels of doneness (rare, medium, well-done). It is appropriate for grilling steaks, deep-fried food, potatoes, fish, omelettes, and pancakes, as it ensures even cooking and retains the juiciness of the food.

100% DELICIOUS!

How does it work?

IQ sensors are built into each cooking zone of the hob to allow the use of the outstanding IQCook function on all four zones simultaneously! If you accidentally place a wrong lid on the pan during cooking, IQ sensor technology will perceive this mistake and notify you with an acoustic signal. Cooking process will proceed without interruption.

Patented SmartSense safety function prevents the food from boiling over or burning: if fluid evaporates from the pan, it will automatically switch off the cooking hob.

INDUCTION AND HI-LIGHT GLASS CERAMIC HOBS

Cooking with induction

With induction technology only the surface under of the utensil is heated, not the entire hob. As a result, the adjacent hob surface, which is not in contact with the cookware, is cool and safe to touch. Once the utensil has been removed from the zone it has been switched off or the plate has been switched off, the temperature of the hob surface drops rapidly. Due to the instant responsiveness of the induction zone, there is no danger of boiling over, which also spares you the inconvenient and unpleasant chore of extra cleaning. By a simple touch of your fingertips you can easily adjust the temperature when preparing various sauces, melting chocolate or performing other temperature-sensitive cooking operations. The key advantages of induction hobs lie in their speed, economy of use and safety.

Two or three and oval ring heating zones

Two- or three ring heating zones make it possible for your hob to adapt precisely to the various cookware used. The oval heating zone is ideal for cooking large cuts of meat or fish. By simply switching on the extra rings, you can increase the cooking zone as required, thereby saving valuable energy.

BoilControl

The BoilControl function prevents pots from boiling over as it automatically adjusts the temperature of all HiLight cooking zones. After initial operation at maximum heat the hob regulates the heat output to hold the temperature at the set level. Function can be switched on or off any time. Your pots will never boil over ever again!

Rapid and economic

Time needed to heat 2 litres of water from 15° to 90° C (in minutes)

| | |
|---|---------|
| XtremePower induction | 4.2 min |
| XtremePower induction without PowerBoost function | 5.7 min |
| Induction with PowerBoost function | 6.5 min |
| Induction | 7.1 min |
| HiLight hob | 10 min |

GAS

HOBS

▷ Cooking with gas

Gorenje gas cookers are characterized by their superior utilisation of an open flame, which translates into a superior heat output and improved cooking performance. The food coagulates faster, which locks in the majority of nutrients and preserves the natural flavour. The burners are made of three components, which can be easily taken apart and just as easily cleaned.

▷ Gas or a combination of gas and induction on tempered glass hobs

The wide range of Gorenje hobs also includes a selection of ceramic glass hobs fitted with gas burners. Also a useful combination of two gas burners and two induction zones on one hob. In addition to giving you a professional chef's control, this combination has the extra advantage of easy cleaning and an appealing design.

Wok burner

A designated, triple crown gas burner heats the wok at an accelerated rate, which allows you to prepare your dishes within minutes. Vegetables will be crispy and cooked just right, and will retain more vitamins, minerals and other nutrients compared to food cooked in a conventional way.

HEAVY DUTY CAPACITY IN STYLE

A wide range of cooker hoods of differing capacity, and appearance, are available to provide efficient ventilation of the kitchen including elimination of odours, humidity, and grease particles. The space will define the required capacity; your personal taste will guide the choice of the perfect model for your kitchen.

- High quality materials and innovative design to improve the functionality and enhance the appearance
- Electronic control and nearly fully silent operation
- Sensor technology automatically regulates air cleaning process.
- P.A.S. technology allows direction-controlled air suction along the outer edges of the hood
- Quality metal filters are simple to maintain

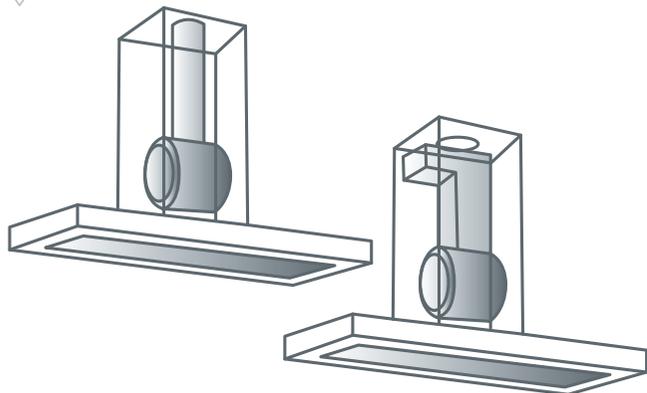

PERFECTION OF TECHNOLOGY

Easy-to-clean filters

Metal filters in the Gorenje hoods, which are designed to remove fat particles, can be easily removed and cleaned. You can wash them by hand or in a dishwasher using a 'gentle wash' programme. However, acrylic or paper filters used for the same purpose can be simply replaced with new ones.

Extraction vs. re-circulation

Dependant upon your requirements you can choose between extraction and re-circulating hoods. Extraction hoods draw in cooking fumes and trap vapours through a filter while expelling odours to the outside through a ventilation duct. Recirculating hoods draw in steam and odour saturated air through a filter, then returns the treated air into the kitchen. For superior performance, a carbon filter (available separately) can also be installed.

Important: Please note some models come with European plugs as standard

Ceiling-mounted hood

Architectural trends of modern kitchens without wall cabinets compel careful choice of the kitchen hood. One of the most elegant solutions is the ceiling-mounted hood which delivers maximum performance of steam and odour extraction. For best results, these hoods should have the motor installed outside the kitchen as this will result in virtually completely silent operation. Although ceiling-mounted hoods are installed farthest from the cooking hob surface, perimeter extraction will provide extra power and airflow speed and thus ultimate performance.

Downdraft hood

This elegant and efficient solution is particularly suitable for wider cooking hobs in which cooking zones are laid out side by side. The downdraft hood is installed next to the hob to directly extract the steam and the odours during operation. It can be built into a kitchen island or installed on a worktop next to a wall since the position of the motor allows direct extraction outdoors, through the kitchen wall. Optionally, it can also operate in filter version using a simply installed charcoal filter.

FREE 5-YEAR PARTS AND LABOUR GUARANTEE

Gorenje offer a **free 5-year parts and labour guarantee** on all built-in ovens, hobs, hoods and built-in cooling and selected freestanding cooling and washing products.

This guarantee shows our confidence in our technology and excellent product quality.

All Gorenje appliances not covered by a 5 year guarantee, get a fully extendable free 2 year parts and labour guarantee.

For more information related to the registration of your appliance under guarantee, please see our website www.gorenje.co.uk and go to "Registration".

AFTER SALES SUPPORT

Once you have bought a Gorenje appliance you can relax knowing that in unlikely event of a fault occurring, you can rely on us to look after your appliance. If you are experiencing problems and require customer support please contact our Service Hotline on:

0844 557 9000
(Republic of Ireland: 01 8835622)

Please have all your appliance details and date of purchase ready in order for your call to be dealt with efficiently.

Service Hotline opening times:

- Monday - Friday 8am - 6pm
- Saturday 9am - 4pm
- Sunday 11am - 3pm

PRODUCTION: Development of new technologies is a thrilling process. Virtually every day, in every moment, a new idea is born somewhere in the world, a new scientific breakthrough is completed, and a new finding is arrived at. However, technology should not and cannot be an end-state to itself. Therefore, we are starting at the other end: at your home. You are our inspiration for development of technologically perfected solutions.

Gorenje continuously seeks improvements in specification, design and production of products and thus, alterations take place periodically. Whilst every effort is made to produce upto- date literature, this brochure should not be regarded as an infallible guide to current specification, nor does it constitute an offer for the sale of any particular appliance.
